Supplementary information

S1: Non metric multidimensional scaling (MDS) plot obtained from the analysis on morphological data of *Noccaea caerulescens* populations of the four different sub-sites measured in year 2009 (leaf number, leaf length, leaf width, height of stalk).

![MDS plot](image)

S2: PERMANOVA test for the simultaneous response of morphological traits (leaf number, leaf length, leaf width, height of stalk) of *Noccaea caerulescens* to sub-sites in the year 2009.

* Putative protein identification of the closest match in the SWISS PROT database

*Amount of protein estimated by the DeltaVue software by Absorbance at 214 nm. ANOVAs after log transformation and Tukey’s Post Hoc tests were performed on data. Intensity values with similar letters are not significantly different (P<0.01)
